Brain Quest Workbook: Grade 3

Customer Reviews

This is one in a series of workbooks, each of which offers an abundance of learning activities, exercises, and games that are presented with superb production values. Appropriate to the given age level, much of the material focuses on basic subjects such natural science, mathematics, history, and social studies while enabling children to strengthen their reading, reasoning, and writing skills. The editors of Brain Quest believe that:"All kids are smart - though they learn at their own speedAll kids learn best when they're having funAll kids deserve the chance to reach their potential - given the tools they need, there's no limit how far they can go!"I agree, while presuming to add that children will learn more and have more fun meanwhile if, when completing various exercises, adults are involved. As a parent of four and a grandparent of ten, I can personally attest to the pleasure an adult will also have. Each volume in the series is a WORK book. Exercises are completed with crayolas or pencils on the page on which it appears. Correct answers are provided. One caveat: Resist the temptation to control the learning process as a child completes an exercise.This volume, Grade 3 (ages 8-9), was written by Jan Meyer, with Anna Shults serving as consulting editor. It is worth noting that Shults was a 2004 National Teacher of the Year Regional Award Winner. The material consists of organized curriculum-based exercises that help children to gain an understanding of spelling and vocabulary, language arts, reading, writing, math skills, addition and subtraction, multiplication and division, fractions and decimals, measurement, time and money, word problems, social studies, and science.
