Cool Cars And Trucks

Synopsis

Attention young LEGO brick builders: Whether you'd like to build an SUV, an excavator, a tanker truck, or a race car, this hands-on book will show you how. You can create street scenes such as a construction site, a fire rescue, or even a family on moving day. Children of all ages will let their imaginations run wild as they learn that there are no limits to what can be created with LEGO. And easy-to-follow instructions are included for several of the models!

Customer Reviews

My son is a certified Lego fan. He loves to build cars and has been a car child since 3 years old. He has almost every Lego racer kit on the market. He routinely takes them apart to make a new creations. When I saw this book I knew this was a must have.From the moment we got the book he has not put it down. We have all recreated a lot of the designs and have been inspired to make new designs. He loves sharing his designs on Sean's website.This book also makes a great gift for the Lego fan in your life. My son's official review is "This book is awesome. Where is the next one?"

I originally wrote a review of this book when I first bought it and at that time my Son was younger. At the time he was younger and needed experience. I tried building items in here and cannot but now I realize why. I am one of those people that need Lego instructions because I can only build things

that way. My Son is now 6 and can build anything in this book. I would recommend that if you buy this book you purchase it for someone that already has a good working knowledge of building with Legos. It is especially good for someone who builds things free hand (without lego instructions). My Son likes this book so much we just bought the one about building Cool buildings.

Sean Kenney was introduced to LEGO bricks when he was a child and obviously the fascination for them never abated because he now is "recognized as one of the premier LEGO brick builders in the world." In this book you can see a photograph of him at work sculpting a bust of a man in his studio. Container after container of LEGOS can be seen on the shelves behind him. Most kids don't have as many blocks as Sean does, but if you have a passion for them and a few containers, you're going to love building some of these cars and trucks in this book! Some of the cars in this book can be patterned after a single model that you'll have directions for, while other things like simple furniture on the "Moving Day" page can be easily built by the average reader just by looking at them. The first photograph we see is of a car carrier hauling SUVs and they are some cool. In fifteen clearly diagramed steps you can create your own SUV. With a few additions or subtractions you can make a Sports coupe, Pickup truck or a Minivan, each of which are photographed for you to see. Other cars and trucks included are taxis, sporty cars like a police cruiser, airport vehicles, working trucks (heavy equipment), "pocket-sized crazy cars," rescue vehicles, a semi rig, visuals to design your own trucks and more! This is a great book for the budding LEGO fan with a wide assortment of projects to build. I liked the vibrant colors and theme of the book. Each model that does have directions has step-by-step instructions and illustrations that make building easy and fun. The book also encourages youngsters to be creative and shows additional vehicles that can be made by altering a few simple details or blocks. If you have a LEGO fanatic in the house, this would be a great gift . . . along with a few extra LEGO pieces!

If you are reading this review then you probably have the internet and do not need to buy this book. The book contains instructions for five small vehicles, and the rest is nothing more than pictures. All of the cool or interesting looking vehicles have no instructions included with the book. If you can look at a picture of a Lego construction and figure out how to build it, then great. But this also brings up my point that you do not need this book. If all you need is a picture of a project from one angle, then by all means save yourself some money and use the internet. Do a Google image search. Heck, I can find better instructions from an eight year old kid on YouTube! I bought this book hoping to get some instructions for my son and me on how to build "cool cars and trucks." What I

got was a book full of nice photos. Save your money and use the internet. There are better instructions and better pictures online.

I was looking for directions for my 7 year old granddaughter to use to build with Legos. It took her no time at all to build some of these vehicles by herself. I just have to get her more Legos because she didn't have enough to make them all at the same time! Great book!

I spend insane amounts of money on new Lego kits every birthday and Christmas, which get built once, and eventually broken down and amalgamated into the giant bucket of random Lego graveyard under the bed. I hoped this book would get them to pull out that bucket of Legos and build something new without me buying another set. I think they may have built one or two things before losing interest and wanting more sets. I personally think it's an awesome book but I guess they weren't completely sold.

The book has pictures of many things it doesn't provide patterns for. A bit frustrating if you want to build everything they picture. Also you probably won't have all the necessary pieces for everything. It still is a fun book for generating ideas. We were able to build some of the things in the book.

I purchased this book along with the one on cities for my boys a year ago and out of all the Lego books that I've purchased these two are by far their favorites. My boys have tons of Lego bricks and just needed a jump start and some ideas that they could run with. This book provided just that. This is not an instruction manual with step by step directions laid out, although there are some for smaller things, but it shows creations that are really do-able and inspires them to create with what they have on hand. I highly recommend this series for all Lego builders out there.
